

Web Hosting

Australian Web Hosting Plans:

For any business, company or individual a website is now essential for providing information about their products or services to potential customers 24 hours a day.

Whether you are attracting prospective customers using search engines, or seeking to save costs providing online product information, our Web Hosting Packages will meet your needs at affordable and competitive prices.

Integrated Net Services' Australian Web Hosting Packages are hosted on servers in a secure data centre that is geographically located in Australia. This means if you wish to host an Australian website with a predominantly Australian target market, your audience should experience a better response time from your site then if it was hosted on US servers.
